

How do we collect the money?

Once planning permission has been granted for a new development we will issue a Liability Notice detailing the CIL amount the development is liable for.

When work has commenced on the site a 'Demand Notice' will be issued and the developer will have 60 days to pay the levy.

CIL is usually paid as a cash contribution, but it can also be payment in kind (once agreed by the council) through land or infrastructure. The district council can also introduce an installment policy. However, CIL is a non-negotiable fixed charge.

Ultimately if we have not received payment we can take out legal proceedings to make sure we receive what we are owed.

COMMUNITY INFRASTRUCTURE LEVY (CIL)

A new way to help fund infrastructure projects

For further information please visit our website www.southoxon.gov.uk/cil or telephone 01491 823740

Please share your opinions & help shape our South Oxfordshire

What is the Community Infrastructure Levy?

The Community Infrastructure Levy (CIL) is a way the council can raise funds from developers undertaking new building projects within the district. The money can be used to fund a wide variety of infrastructure that is needed as a result of the new development. Infrastructure includes; roads, education, community facilities or open space.

CIL is charged per new home or per square metre (sqm) of office or large retail floorspace. Exemptions exist for residential annexes, extensions, self-build housing, charitable buildings and affordable housing.

Striking a balance

To ensure that we continue to encourage development across the district we need to strike a balance between collecting revenue to fund infrastructure and ensuring that the rates are not set so high that they prevent development happening. We believe our rates achieve this balance, based on the available evidence.

How much is the Community Infrastructure Levy?

We are currently setting our charges. We've published what's known as a charging schedule, which identifies how much a developer has to pay per sqm, depending on the location, size and type of development. You can view our charging schedule by visiting www.southoxon.gov.uk/cil

How does it affect you?

CIL directly and indirectly affects you. We will explain how we spend CIL, however a key part of the process is that a percentage of the money goes back to the local community where new development will be located. This helps ensure that local infrastructure used by you won't be adversely affected by the new development.

In areas where CIL is generated, towns and parishes are able to decide how to spend their percentage of money collected. In certain cases we may look to work with towns and parishes to pool contributions to help fund key infrastructure projects.

As town and parishes are accountable to their local communities it will be important for them to keep transparent records of CIL funding and to have a good understanding of projects that local people are keen to see take place. We will try to provide guidance to towns and parishes on this approach. The important thing to remember is that CIL money must be spent on infrastructure.

How does the district council spend CIL?

The infrastructure projects that we intend to fund using CIL are shown in the full infrastructure list known as a 'Reg 123 list' which is based on information we've obtained from key infrastructure providers and is derived from the Infrastructure Delivery Plan, which is part of our core strategy.

The full version of the infrastructure list is available to view www.southoxon.gov.uk/cil

What is infrastructure?

The government has provided a very wide definition of infrastructure, but typically these are things like:

- Transportation roads, bus routes, rail network
- Education facilities schools, colleges, universities, adult learning centres
- Utilities water, power grids and sewers
- Communities facilities libraries, sports and leisure facilities, community centres
- Health care hospitals, local GP surgeries and other facilities
- Emergency & essential services fire, police and ambulance facilities
- Green spaces playing fields, sports pitches and wildlife areas; and
- Communication systems digital telecommunications, superfast broadband, phone and 4G reception.

There are various agencies responsible for building, maintaining and operating the different types of infrastructure such as Oxfordshire County Council (roads, education), Highway Agency (motorways and trunk roads), private utility companies, developers, the district council and parishes. The funding of this infrastructure comes from different sources. In order to introduce CIL we need to demonstrate that there is a funding gap.

What do we need for CIL?

For the CIL to work we need to have some key information in place.

First, we need to have an adopted Local Plan or Core Strategy which guides development in the district and is used to decide planning applications.

We also need to produce a document called an Infrastructure Delivery Plan which sets out what infrastructure is needed to support the growth that was identified in the Local Plan or Core Strategy. This will allow us to produce the 'Regulation 123 list' of infrastructure we intend to spend CIL money on.

For South Oxfordshire we have our adopted Core Strategy. This will be replaced by our emerging Local Plan 2031. Once adopted we will need to update our CIL to reflect any new growth and required infrastructure.

Stages of CIL

The CIL process follows these main stages

Stage '

Gather evidence and viability testing (of suitable rates)

Stage 2

Consult on the preliminary draft charging schedule

Stage 3

Having considered comments update our schedule and consult on a draft charging schedule

Stage 4

Submit the schedule for examination

Stage 5

After a positive examination we adopt our CIL

What are Planning Obligations (Section 106)? See table right

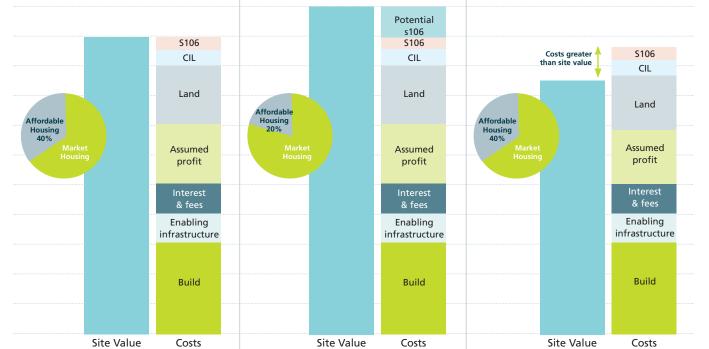

They are an alternative means of securing infrastructure funding, but the government is restricting how this approach can be used. Section 106 agreements are legal agreements between the developer, us and sometimes the County Council, which we draw up before granting planning permission. This means the developer is legally bound to deliver the specific infrastructure or funding for what has been identified with their proposals. The table to the right shows the differences between CIL and Section 106.

Development viability and CIL

To make sure that our CIL rates are viable and set at the right levels we commissioned expert consultants to carry out research. They tested different rates in combination of the planning requirements in our Core Strategy and our need for affordable housing. Schemes with a greater proportion of market housing (not affordable housing) will generate more s106/CIL monies for infrastructure, than those with a higher requirement for affordable housing.

In some parts of our district, development is only viable if we set a lower rate, which means we generate less CIL income.

Development A:
40 percent affordable housing

The scheme has a particular value (e.g. £100m). If the scheme is to be viable, the cost must not exceed the value. Consequently there is a finite amount of CIL and s106 that can be charged. In this case, the development remains viable after the CIL and s106.

Development B: 20 percent affordable housing

The scheme has a higher value (e.g. £110m) as more market housing can be sold. Once set CIL is a fixed amount. In this case there is more scope to charge s106 to deliver on-site or community infrastructure while keeping the development viable.

Development C:
40 percent affordable housing scheme unviable

The scheme is located in a **lower value area**. Although the scheme requires similar levels of investment, sale values for the market housing are lower, decreasing the potential income for the development. Once all these factors are taken into account, the development is unviable.

Community Infrastructure Levy

What's the difference between CIL and Planning Obligations (Section 106)?

Planning Obligations

| | | (site specific mitigation) | |
|-------------------------------|---|--|---|
| Scope | What type of Infrastructure can it support? | Only items justifiable within the three legal tests: nedessaake the development acceptable in planning terms direlately to the development arfelirely asonably related in scale and kind to the development | All infrastructure necessary to support development of the area |
| | Can it be used to secure Affordable Housing? | Yes - use to prescribe an agreed proportion of affordable housing | No |
| | Geographic Application | Site specific impacts that may or may not reach beyond the 'red line' of the application site | A charging schedule must cover whole district with no exceptions (room for differential rates) |
| | What types of development are eligible to pay CIL? | All development (but the time consuming nature of the process means only the largest are charged) | Any development over 100m ² . Applies to buildings that people would normally go into. (Some exemptions existing for charities and social housing.) |
| | Eligibility of Capital & Revenue | Capital & Revenue both eligible (Revenue for maintenance & agreed revenue items) | Provision, improvement, replacement, operation or maintenance of new and existing infrastructure |
| | Can the money be pooled? | Not for long. After April 2015 we will not be able to pool more than five obligations | CIL is effectively a pooling mechanism with complete flexibility over spending priorities |
| | Once the money is collected how easy is to change what it is spent on? | Items agreed within the s106 Agreement (this is often inflexible). It cannot be spent on items identified for CIL investment | CIL can be spent on any infrastructure. The council needs to set out the items they intend to fund using CIL in an infrastructure list, which has derived from the Infrastructure Deliver Plan (core strategy). |
| Setting Charging Levels | Is there a need to establish a list of Infrastructure requirements | The council needs to justify s106 is necessary based on the three legal tests (as above). A Planning Obligations SPD is required (or as a position statement on their use for Examination) | Yes. Need costed infrastructure list to prove local need (there is no emphasis on prioritisation at the evidence gathering stage and explicit recognition that the list will change over time) |
| | Setting differential rates | Negotiated proposal taking each development on its merits | Differences in rates should only relate to viability for different diffseent ofschelelopment |
| | Charging Units | Flexible | Per m² of additional floor space only (all uses) – some exceptions |
| | Testing Viability | Case by case basis (leaving room for negotiation) | Viability is tested at a district-wide level at the evidence gather stage, then CIL payments are mandatory |
